VIGOR SIGHT

SEE BEYOND. ACT WITH CERTAINTY.

Intelligent Video Surveillance & Threat Assessment System

VIGOR SIGHT is an intelligent video surveillance and security intelligence platform being developed by VIGOR Technologies. It is designed to help organisations make better use of compatible existing CCTV infrastructure by bringing video analytics, event monitoring, evidence recording and incident workflows into a unified operational environment.

CORE CAPABILITIES

• People & object detection	• Activity & crowd monitoring
• Configurable threat assessment	• Facial recognition workflows
• Automated event notifications	• Pre-/post-event evidence recording
• Incident records & reporting	• Site-specific configurations

DESIGNED FOR EXISTING INFRASTRUCTURE

The integration approach includes RTSP video streams and ONVIF-based device discovery. Actual compatibility depends on camera and NVR model, firmware, stream configuration and site network conditions. Local/edge processing can be assessed according to the number of streams, resolution, frame rate and selected analytics workload.

APPLICATION AREAS

Manufacturing • Infrastructure • Government facilities • Transportation • Commercial establishments • Critical infrastructure

PERFORMANCE WITH EVIDENCE

Detection accuracy, false-positive rate, processing latency, uptime and independent certifications are not published as verified benchmarks at this stage. They should be established through repeatable testing on supported configurations and representative deployment environments.
